Automated Human Risk Management (HRM)

Measure, reduce and monitor human cyber risk through admin-lite automation.

Sources: Verizon DBIR 2021

Humans are targets

36% of data breaches involve phishing.

Humans make mistakes

90% of data breaches involve human error.

Compliance is essential

Key standards like ISO 27001 require regular staff training.

Transform your employees into your first line of defence

Whether it's sharing passwords with colleagues, emailing sensitive data to the wrong recipient or falling victim to a phishing attack, employees are seen as the 'weakest link' in your cyber security.

That's why it's vital to understand where the human vulnerabilities exist within your business and to train staff regularly to reduce the risk of a data breach, fines or damage to your business's reputation.

Human Risk Management (HRM) is the new class of user-focused security that enables you to do just that through personalised security awareness training programs, periodic phishing simulation campaigns, simplified policy management and ongoing dark web monitoring - completely managed for you.

Benefits-at-a-glance

- ✓ Drive user resilience to sophisticated phishing attacks
- ✓ Reduce user-related security incidents caused by human error
- ✓ Demonstrate compliance with key standards like ISO 27001 and GDPR
- ✓ Understand your business's employee security posture with a human risk score
- ✓ Dig deep into ongoing human risk with training, phishing and policy reporting
- ✓ Save time with readily-made courses, phishing campaigns and policy templates
- ✓ Simple setup, fast deployment and automated staff training reminders

Everything you need to build a security-savvy culture

Assess each user's security knowledge gaps and automate regular training courses that tackle their unique risk areas.

uLearn

Assess each user's security knowledge gaps and automate regular training courses that tackle their unique risk areas.

uPhish

Automate periodic phishing simulations that assess your employees' ongoing risk to a range of attack techniques.

uBreach

Detect when stolen user credentials are found on the dark web that could be used to launch an attack.

uPolicy

Keep users well-versed on security processes with easy policy management and trackable eSignatures.

Human Risk Reporting

Understand ongoing employee cyber risk and measure the impact of your users' training through human risk scoring and reporting.

Simplified through automation

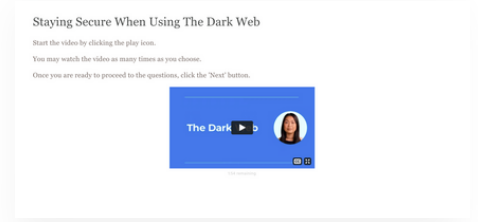

Evaluate

Understand your employees' existing risk areas through a quick 15-minute gap analysis assessment.

Educate

Strengthen user resilience with tailored training programs that prioritise courses to tackle each users' high risk areas first.

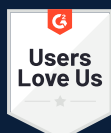

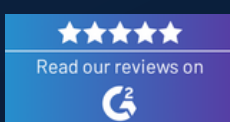

Calculate

Understand ongoing human risk and measure the impact of the training through real-time reporting.
